Answer: A pencil! ?

Explanation: Well, you see, a pencil is made from graphite that is taken from a mine and then it's all cozy in a wooden case. But when it's needed, we just sharpen it away until it becomes tiny and we throw it away! Poor little pencil, it's like going from the mine to a fancy wooden hotel only to end up as a tiny stub. But hey, that's life for a pencil! ??
